

MOVING FORWARD

DREAMCATCHER RANCH
PRODUCTION SALE

Saturday, October 24, 2009

12 Noon • At the ranch • San Marcos, TX

MOVING FORWARD ADVANCING AGAINST HEALTH AND GENETIC CHALLENGES

This past year has been a challenging one for all producers in the Angus breed. With the introduction of new technology, genetic challenges have been identified and pursued bringing about much anxiety and loss for many breeders. Many genetic manifestations can now be identified in individual cattle and these animals are being removed

from seedstock production. This is the flavor of the moment as we have identified technology to rid ourselves of these genetic defects and most everyone seems to be aware of this today.

Dreamcatcher Ranch has been very aggressive in using this technology and removing from its offering any individual that tests positive for these identified genetic manifestations (AM and NH). These cattle have all tested free of these genetic combinations.

At a time when most producers are focusing on these new challenges, Dreamcatcher continues to pursue cleanliness of its cattle in its herd health program as well. Dreamcatcher Ranch implements a very stringent herd health strategy shielding itself from Bovine Leukosis, Johne's disease, Neospora caninum, Leptospirosis, Bovine Virus Diarrhea Virus, and many other common cattle diseases. An aggressive vaccination, deworming and fly control program is implemented from birth to the time these animals are sold to valued customers. All cattle are vaccinated with modified viral vaccines and pasturella bacterins to protect against viral and bacterial causes of bovine respiratory disease complex. Clostridial vaccine is used multiple times to prevent against diseases such as "blackleg and "redwater". A six strain leptospirosis vaccine is used to prevent against abortions and infertility associated with Leptospirosis infections. Cattle are dewormed routinely as they come through the chute and fly control is maintained with the use of topical adulticides in combination with feed through immune growth regulators. All sale cattle have been ear notched and tested for Persistently Infected Bovine Virus Diarrhea and blood tested for Bovine Leukosis. Additionally, all cattle are supplemented with an aggressive micromineral program to develop and maintain healthy immune systems.

Dreamcatcher Ranch is doing all they can to present to you the "cleanest" cattle possible. I can testify to the protocols applied, implementation strategies used, and verification of tests conducted to insure that these cattle are as healthy and genetically sound as can currently be achieved. Rest assured, this year's cattle offering has been prepared for you with the best technology and herd health program currently available.

Dr. Steven Golla, Chisholm Trail Veterinary Clinic

This last year has given us many things to complain about or to provide excuses for our business. Certainly, the economy, the weather, and new genetic discoveries have provided opportunities to lament about the cards we have been dealt. As we thought about and prepared this year's sale offering, we deemed it important to forget those things and do what we have always done—

MOVE FORWARD.

Despite advice to the contrary, we are offering the most progressive, continually improving, database selected set of bulls and females ever. We have tested and eliminated from our herd any and all genetic defects that have at this point been identified. We have taken the remainder and used our normal data based selection criteria. Here are some of the highlights.

In the bulls, there are 35 bulls or 35% of the bulls in the top 1% of the breed for \$Beef (see Richard McClung's note on page 17) and 90% of the bulls are in the top 10%. We have not and will not let the events of this year divert us from producing bulls for our customers that will make them money because they excel in the traits of economic importance. In order to offset the bulls eliminated through the genetic cleansing, the Gardiners have been kind enough to send 21 of their bulls down to get us back to 100. Same genetic quality, same guarantee.

For the females, we have taken a little different format in an effort to bring even fresher and more powerful genetics to our seedstock customers. The first female family offered is our best example. We are not only offering the powerful donor female 6108, but we are offering her best heifer progeny to date who was recently ranked as the number 2 \$Beef female in the breed at +\$77.78. In addition, in case you are not the most persistent bidder for this female or her mother, you can take home (or leave with us for scanning) two full sisters born in the spring who could knock 8J04 off her pedestal as #2. We are doing this type family grouping on all the older donors for which we have daughters. We hope this adds value to our offering.

For now...***MOVING FORWARD***

As you will see, we have used Objective heavily. The bulls like 8J01 demonstrate our logic. Low birth weight, explosive growth, high carcass traits on sound, functional, phenotypes make our customers money.

1/2 interest and full possession
sells on every bull in the sale.
We are retaining 1/2 revenue
sharing and semen interest.

The second most used AI sire in this sale is Predestined and 8D08 demonstrates why. He has all the traits of economic importance with exceptional thickness on a moderate frame. The dam of this bull, 6J03, and his brothers, Lots 3 & 4, sells as a featured donor (Lot 101). These bulls show why we collected her.

The Total mating on Cheshier's cow added the growth to make very good bulls like 8A53.

WATCH THE VIDEO

We have provided as much information as possible in this sale book. However there's just no substitute for seeing the animals. You are, of course, invited to visit us at the ranch prior to the sale to preview our offering. (Let Karen know ahead of time and she'll cook your lunch.) You can also see videos of the animals on our website at www.dreamcatcher-ranch.net or at www.Livecattlesales.com. Videos of selected lots are already available for your viewing and the video of the complete sale offering will be online by mid October.

WHY THE EMPHASIS ON \$BEEF

Offer a quality product meeting consumer demand that is also profitable for those who produce it—the beef business as it should be. What's the surest way to get there?

We feel the greatest method of achieving the universal purpose of the beef industry is the use of the \$Beef Value. As an index expressed in dollars per head, there is no easier or more reliable way to predict how your cattle will perform. The data shows that progeny from high \$B sires more than tripled the percent Prime and percent upper two-thirds Choice increased more than 34% with Select cut in half. High \$B progeny had a 42 lb. carcass weight advantage over low \$B progeny.

DREAMCATCHER RANCH BREEDING GUARANTEE

We guarantee that all breeding cattle sold by Dreamcatcher Ranch are fertile to the best of our knowledge. If a bull is injured at any time in the 12 months following the sale so as to make him functionally infertile, we will provide you with a satisfactory replacement (if available) or issue you a credit equal to the bull's purchase price minus the salvage value received for that bull. If a female is determined to be a non-breeder, then we would ask you to sell her and would offer you the difference of her purchase price minus the salvage value as a credit in any future Dreamcatcher sale. We would simply ask you to contact us before you cull your infertile animal. All credit is good until it is used and does not expire.

This guarantee is not a life insurance policy. Collection of virgin heifers sometimes results in difficulty in settling them. We do not recommend collection of a valuable heifer at all and certainly would not do so more than once. We will not give credit for a dead or incapacitated animal resulting from negligence. We would suggest that normal care still needs to be exercised toward these animals.

This guarantee is in addition to the Sales Terms and Conditions of the American Angus Association which also apply.

6108's individual data is impressive (birth ratio 1 @ 93, weaning 1 @ 114 and yearling 1 @ 106). Top 1% of the breed for WW, YW and \$Beef. Her progeny data makes her the #33 working dam of the entire breed. However, the measure of a donor has to be the progeny she produces. Her daughters as well as her sons selling as Lots 5, 6 & 91 demonstrate and verify her credibility as one of the great cows of the breed. Her two scanned sons by Objective as well as her 8 unscanned sons and daughters all rank in the top 1% of the breed for the traits of economic importance capped by her daughter, 8J04, who sells as Lot 100A who is the #2 \$Beef female in the breed. The biggest issue at the sale will be whether the first choice for the successful bidder will be this cow, her incredible daughter or whether the bidder doubles the bid and takes them both. 6108 was collected 7 times for a total of 55 embryos.

Bred for a 3/14/10 Objective calf. An average of the sire and dam's \$Beef suggests a \$Beef for the calf over +71. This embryo was sexed as a heifer thus offering another sister to the #2 \$Beef female of the breed, further complicating the choice of the cow vs. the heifer.

THE FEMALES THAT SELL

Our female offering is significantly different from other sales because we do not retain any of our heifers to become part of a registered mature cow herd. We simply do not have one. Since we are greater than 90% E.T. (the non E.T. calves are virtually all sons or daughters of donor cows), the only mature cows we have are recips. Approximately 85% of all of our females sell as bred or open heifers. The remaining females enter our donor program for one season and sell the following year. Our customers can select from our very best genetics with the knowledge that we are not holding back any of our production.

#2 \$Beef
Female in
the Breed!

6D02 is another very productive donor from 2008-2009. A Predestined out of an Expectation and half sister to 6108. She is slightly younger than the first donor selling so we do not have a yearling daughter to sell with 6D02 but will sell one of her weaned heifers. "Spot" has a birth mark on top of her shoulders. Jared Murnin, AAA representative, has inspected it and certifies that it is not genetic as shown by all of her solid black offspring. 6D02 is a good embryo producer. Collected 6 times for a total of 44 embryos.

Bred for a 4/30/10 B/R Future Direction 4268 calf.

One of "Spot's" daughters, 9J45, continues the ideal mating of Objective to Predestined daughters. The result is as pleasing to the eye as it is to the data. It is that combination of phenotype as well as top 1% data that will control the future success of these cattle. This is a show heifer prospect.

Open.

OPEN DONORS

Some of the exceptional donors in this sale will sell open. We feel that they probably have two or more successful flushes remaining before they should be bred. This knowledge allows customers to realize a return on their donor investment as soon as possible. We guarantee these females will flush when handled by a certified E.T. embryologist. If a buyer wants to breed one of the donors immediately, we guarantee them to breed and will provide the A.I. service if the animal is temporarily left with us.

Dreamcatcher Ranch **DONORS**

Don tells Karen the nitrogen tanks full of embryos are more valuable than her grand piano and need to remain in the living room.

Another donor whose worth is demonstrated by her offspring. 6231's natural bull calf by Objective, 8J3, selling as Lot 71, has a birth to weaning spread of 0 to 124. A maternal sister to Lot 100 out of the incredible 2B02 cow. 6231 was our choice of all the 112 daughters out of that cow. Collected 5 times for a total of 13 embryos.

Bred for a 2/24/10 Big Eye bull calf. An average of the sire and dam's \$Beef suggests a \$B for the calf over 66.

Last year's Lot 1 cow, 6J2, is now a donor at Cain Ranch in Mississippi.

Dreamcatcher Ranch DONORS

We enjoy working with Ernie Gill who takes the catalogue photos and the videos and handles the online auction.

Every cow needs a good scratching post.

DRMCTR Objective 7J6 • Sells as Lot 107

PAIRS

A natural calf of a donor cow, 7J6 could easily have been a donor for us. Negative birth weight donors offer great flexibility in mating to the best bulls of the breed.

Due 9/19/09 to have a 5050 calf at side. An average of the sire and dam's \$Beef suggests a \$Beef for the calf over 67.

This heifer is a sister to my favorite bull in the sale, Lot 37, 8J72. Their donor dam has proven to be a very good cow. Low birth weight, high growth, exceptional carcass combines to make really good cattle like 8J74 and her brother. A joint project with Ben Soto.

Bred for a 3/16/10 5050 calf. An average of the sire and dam's \$Beef suggests a \$Beef for the bull calf over 68.

Ben Soto has been with Dreamcatcher Ranch many years and is a valuable asset.

from the
crowd.

The Guaranteed Gardiner Genetics (G³) Identification Program is designed to add more value to GAR-influenced genetics. Through IMI Global, Inc., the G³ program will also provide age and source verification using IMI's USVerified™ program. In addition, the G³ program will gather vaccination protocol and genetic information on enrolled cattle.

Dreamcatcher customers wishing to tag cattle with National Animal Identification numbers may participate. Eligible cattle must be sired by registered Gardiner Angus or Dreamcatcher bulls or sons of these bulls (50% GAR or DRMCTR genetics).

Dreamcatcher Ranch will offer a sale credit of \$2.00 per head for all cattle tagged with G³ tags. This credit may be used in the Dreamcatcher Ranch 2010 sale. For example, if a producer qualifies and tags 300 head of cattle in the G³ program, they receive a \$600 credit.

For more information, contact Don Meador at 512.757.2714 or don@dreamcatcherranch.net or Julie Tucker at Graphic Arts of Topeka, 785.354.8596 Ext. 115, GGG@gathh.com.

Take advantage of the value-added opportunities that result from buying a bull from a seedstock supplier that offers more than just a breed.

***Calves from all bulls selling will qualify for the
Guaranteed Gardiner Genetics (G³) Identification Program**

Dreamcatcher Genetics goal has long been to produce Angus bulls to complement the commercial cow herds that are prevalent in the Southern United States and specifically in South Texas. To that end, we have concentrated on producing bulls that excel in growth, marbling and muscle in order to sire offspring that will earn premiums for commercial cattlemen. I have often claimed that our bulls can raise the average quality grade

of offspring from these cow herds one quality grade (example: from Select to Choice). Now the Gardiners have set out to verify this hypothesis through the Southern Carcass Improvement Project. At Dreamcatcher, we are certainly anxious to see the results. If we are correct and these genetics are as powerful as we believe, we will celebrate with our customers. If we come up short, we will just work harder. Moving Forward. Don

Gardiner Angus Ranch Southern Carcass Improvement Project

A unique breeding project has recently been launched to determine just how much carcass improvement can be made in one generation, using high carcass value Angus bulls on typical cows found in the southern U.S.

The project, a collaboration between K-State University, Virginia Tech and Gardiner Angus Ranch, will focus on 20 head of Southern-origin beef cows, representing typical *bos indicus*-influenced genetics most often found in southern states.

The 20 females have been flushed to (1) proven Angus bulls with excellent growth and carcass traits, and (2) Southern sires representing 9 different breeds with varying percentages of *bos indicus* influence. The calves resulting from the Angus sires X Southern cows will be identified as the test group. Calves resulting from the Southern sires X Southern cows mating will be identified as the control group.

Igenity® has compiled DNA genetic profiles on the 20 donors, all sires and the resulting calves. Calves will be born in the

spring of 2010 and placed on feed at Triangle H Feedyard early in 2011. The calves will be harvested at 15-16 months of age at National Beef. Complete feedlot performance and carcass data will be collected on both groups, enabling a direct comparison of how the two groups performed under industry-typical man-

agement through the feedlot and the packer's rail.

The actual feedlot and carcass data will be compared to sire EPDs, ultrasound and DNA profiles to determine the optimum thresholds necessary to make significant carcass improvement in one generation in a particular population of beef cattle.

The Southern Carcass Improvement Project addresses the beef industry's long-standing need for higher quality grades and better overall carcass traits in Southern U.S. packing plants—a situation that has shown no improvement for many years.

Using 2008 carcass pricing data from U.S. Premium Beef, the average value difference between a USDA Standard grade carcass and a USDA Select carcass equates to approximately \$80 per head.

USDA quality grade data reports 9% (or 3,420,000 head of approximately 38,000,000 head harvested in 2008) were ungraded or USDA Standard. The quality deficiency on this 9% of the industry's beef inventory represents more than \$273,000,000. The difference between USDA Select and low Choice adds another \$56.16 per head to the equation. When combining the difference between USDA Standard and Select to low Choice, the disparity increases to more than \$465,000,000.

The quality disparities typical of Southern-influenced cattle represent a tremendous lost opportunity for the beef industry. Since Choice beef almost always sells at a substantial premium to lower beef grades, higher quality grades

mean greater total revenue benefiting all segments of the beef industry. Lower grades result in fewer dollars in wholesale beef sales, leaving fewer dollars available to be passed back to cattle producers and feeders.

Periodic reports and updates will be released via all media outlets throughout the project and available at www.gardinerangus.com.

"We are excited about this project and believe it can be an important educational milestone for the U.S. beef industry. Gardiner Angus Ranch has worked for many years to create high-value genetics that can significantly improve average cattle, and even below average cattle, in one generation. Now we are putting those genetics to the test to determine how much feedlot and carcass advantage can be gained through the use of high-accuracy GAR sires."

—Mark Gardiner
